CLAIMS

1. (currently amended) A network device comprising:

optical switching logic coupled ~~between to a plurality number of input optical interfaces and a plurality of output optical interfaces, for forwarding sending or receiving an optical data stream to one of the optical interfaces for output on~~ over at least one optical fiber; and

routing logic operably coupled to the switching logic to selectively receive the optical data stream from the optical switching logic and retrieve routing information from the optical data stream, wherein the routing information is used to dynamically control the forwarding of the optical data stream through the optical switch logic to one of the output optical interfaces the optical switching logic and to a number of ports for routing information based upon a routing mechanism, wherein the optical switching logic and the routing logic interoperate to switch and route information for sending or receiving the optical data stream over on the at least one optical fiber.

2. (original) The networking device of claim 1, wherein the optical switching logic is operably coupled to receive an incoming optical data stream from an incoming optical fiber over an incoming optical interface and selectively pass the incoming optical data stream through to an outgoing optical fiber over an outgoing optical interface or divert the incoming optical data stream for processing by the routing logic.

3. (original) The networking device of claim 2, wherein the optical switching logic comprises a demultiplexer operably coupled to demultiplex the incoming optical data stream from a number of incoming optical data streams received from the incoming optical fiber over the incoming optical interface.

4. (original) The networking device of claim 3, wherein the optical switching logic further comprises an optical switch operably coupled to receive the incoming optical data stream from the demultiplexer and to selectively pass the incoming optical data stream through to the outgoing optical fiber over the outgoing optical interface or divert the incoming optical data stream for processing by the routing logic.

Serial No. 09/931,643

- 7 -

Art Unit: 2633

5. (original) The networking device of claim 3, wherein the optical switch comprises an optical add/drop fabric.

6. (original) The networking device of claim 3, wherein the optical switch comprises an optical drop-only fabric.

7. (original) The networking device of claim 4, wherein the optical switching logic further comprises an optical receiver operably coupled to receive the diverted incoming optical data stream from the optical switch and convert the diverted incoming optical data stream into incoming digitally formatted information for processing by the routing logic.

8. (original) The networking device of claim 7, wherein the routing logic is operably coupled to receive the incoming digitally formatted information from the optical receiver and route the incoming digitally formatted information based upon a routing mechanism.

9. (original) The networking device of claim 1, wherein the routing logic is operably coupled to forward outgoing digitally formatted information to the optical switching logic for forwarding to an outgoing optical fiber over an outgoing optical interface.

10. (original) The networking device of claim 9, wherein the optical switching logic is operably coupled to receive the outgoing digitally formatted information from the routing logic and output an outgoing optical data stream to the outgoing optical fiber over the outgoing optical interface.

11. (original) The networking device of claim 10, wherein the optical switching logic comprises an optical transmitter operably coupled to receive the outgoing digitally formatted information from the routing logic and product the outgoing optical data stream from the digitally formatted information at a predetermined wavelength.

Serial No. 09/931,643

- 8 -

Art Unit: 2633

12. (original) The networking device of claim 11, wherein the optical transmitter comprises a fixed wavelength laser for producing the outgoing optical data stream at the predetermined wavelength.

13. (original) The networking device of claim 11, wherein the optical transmitter comprises a tunable laser tuned to produce the outgoing optical data stream at the predetermined wavelength.

14. (original) The networking device of claim 11, wherein the optical switching logic further comprises:

an optical switch operably coupled to receive the outgoing optical data stream from the optical transmitter; and

a multiplexer operably coupled to receive the outgoing optical data stream from the optical switch and add the outgoing optical data stream to the outgoing optical fiber over the outgoing optical interface.

15. (original) The networking device of claim 14, wherein the optical switch comprises an optical add/drop fabric.

16. (original) The networking device of claim 11, wherein the optical switching logic further comprises a combiner operably coupled to receive the outgoing optical data stream from the optical transmitter and add the outgoing optical data stream to the outgoing optical fiber over the outgoing optical interface.

17. (original) The networking device of claim 1, wherein the networking device is an optical switch router.

18. (currently amended) A system comprising at least two network devices, each network device including:

Serial No. 09/931,643

19. (original) The system of claim 18, wherein the optical switching logic is operably coupled to receive an incoming optical data stream from an incoming optical fiber over an incoming optical interface and selectively pass the incoming optical data stream through to an outgoing optical fiber over an outgoing optical interface or diver the incoming optical data stream for processing by the routing logic.

20. (original) The system of claim 19, wherein the optical switching logic comprises a demultiplexer operably coupled to demultiplex the incoming optical data stream from a number of incoming optical data streams received from the incoming optical fiber over the incoming optical interface.

21. (original) The system of claim 20, wherein the optical switching logic further comprises an optical switch operably coupled to receive the incoming optical data stream from the demultiplexer and to selectively pass the incoming optical data stream through to the outgoing optical fiber over the outgoing optical interface or divert the incoming optical data stream for processing by the routing logic.

Art Unit: 2633

22. (original) The system of claim 20, wherein the optical switch comprises an optical add/drop fabric.

23. (original) The system of claim 20, wherein the optical switch comprises an optical drop-only fabric.

24. (original) The system of claim 21, wherein the optical switching logic further comprises an optical receiver operably coupled to receive the diverted incoming optical data stream from the optical switch and convert the diverted incoming optical data stream into incoming digitally formatted information for processing by the routing logic.

25. (original) The system of claim 24, wherein the routing logic is operably coupled to receive the incoming digitally formatted information from the optical receiver and route the incoming digitally formatted information based upon a routing mechanism.

26. (original) The system of claim 18, wherein the routing logic is operably coupled to forward outgoing digitally formatted information to the optical switching logic for forwarding to an outgoing optical fiber over an outgoing optical interface.

27. (original) The system of claim 26, wherein the optical switching logic is operably coupled to receive the outgoing digitally formatted information from the routing logic and output an outgoing optical data stream to the outgoing optical fiber over the outgoing optical interface.

28. (original) The system of claim 27, wherein the optical switching logic comprises an optical transmitter operably coupled to receive the outgoing digitally formatted information from the routing logic and produce the outgoing optical data stream from the digitally formatted information at a predetermined wavelength.

Art Unit: 2633

29. (original) The system of claim 28, wherein the optical transmitter comprises a fixed wavelength laser for producing the outgoing optical data stream at the predetermined wavelength.

30. (original) The system of claim 28, wherein the optical transmitter comprises a tunable laser tuned to produce the outgoing optical data stream at the predetermined wavelength.

31. (original) The system of claim 28, wherein the optical switching logic further comprises:
an optical switch operably coupled to receive the outgoing optical data stream from the optical transmitter; and
a multiplexer operably coupled to receiver the outgoing optical data stream from the optical switch and add the outgoing optical data stream to the outgoing optical fiber over the outgoing optical interface.

32. (original) The system of claim 31, wherein the optical switch comprises an optical add/drop fabric.

33. (original) The system of claim 28, wherein the optical switching logic further comprises a combiner operably coupled to receive the outgoing optical data stream from the optical transmitter and add the outgoing optical data stream to the outgoing optical fiber over the outgoing optical interface.

34. (original) The system of claim 18, wherein the system is an optical switching/routing system.

35. ^{amended} (original) An optical line card for use in a networking device, the optical line card comprising:

a router interface; and
optical switching logic operably coupled to receive an incoming optical data stream from an incoming optical fiber over an incoming optical interface and selectively pass the incoming optical data stream through to an outgoing optical fiber over an outgoing optical interface or

37. (original) The optical line card of claim 36, wherein the optical switching logic further comprises an optical switch operably coupled to receive the incoming optical data stream from the demultiplexer and to selectively pass the incoming optical data stream through to the outgoing optical fiber over the outgoing optical interface or divert the incoming optical data stream over the router interface for processing by the routing logic.

38. (original) The optical line card of claim 36, wherein the optical switch comprises an optical add/drop fabric.

39. (original) The optical line card of claim 36, wherein the optical switch comprises an optical drop-only fabric.

40. (original) The optical line card of claim 37, wherein the optical switching logic further comprises an optical receiver operably coupled to receive the diverted incoming optical data stream from the optical switch and convert the diverted incoming optical data stream into incoming digitally formatted information for processing by the routing logic.

Art Unit: 2633

41. (original) The optical line card of claim 40, wherein the routing logic is operably coupled to receive the incoming digitally formatted information from the optical receiver and route the incoming digitally formatted information based upon a routing mechanism.

42. (original) The optical line card of claim 35, wherein the optical switching logic is operably coupled to receive outgoing digitally formatted information from the routing logic over the router interface and output an outgoing optical data stream to the outgoing optical fiber over the outgoing optical interface.

43. (original) The optical line card of claim 42, wherein the optical switching logic comprises an optical transmitter operably coupled to receive the outgoing digitally formatted information from the routing logic over the router interface and produce the outgoing optical data stream from the digitally formatted information at a predetermined wavelength.

44. (original) The optical line card of claim 43, wherein the optical transmitter comprises a fixed wavelength laser for producing the outgoing optical data stream at the predetermined wavelength.

45. (original) The optical line card of claim 43, wherein the optical transmitter comprises a tunable laser tuned to produce the outgoing optical data stream at the predetermined wavelength.

46. (original) The optical line card of claim 43, wherein the optical switching logic further comprises:

an optical switch operably coupled to receive the outgoing optical data stream from the optical transmitter; and

a multiplexer operably coupled to receive the outgoing optical data stream from the optical switch and add the outgoing optical data stream to the outgoing optical fiber over the outgoing optical fiber over the outgoing optical interface.

Art Unit: 2633

47. (original) The optical line card of claim 46, wherein the optical switch comprises an optical add/drop fabric.

48. (original) The optical line card of claim 43, wherein the optical switching logic further comprises a combiner operably coupled to receive the outgoing optical data stream from the optical transmitter and add the outgoing optical data stream to the outgoing optical fiber over the outgoing optical interface.

49. (original) The optical line card of claim 35, wherein the incoming optical interface and the outgoing optical interface are on an optical physical card, and wherein the optical line card further comprises a physical card interface for coupling the optical switching logic to the incoming optical interface and the outgoing optical interface.

50. (currently amended) A method for multicasting in an optical communication system, the method comprising:

receiving an optical data stream including multicast traffic;

terminating the optical data stream; and

routing the multicast traffic using a predetermined multicast routing mechanism

dynamically controlled by routing information in the terminated optical data stream.

51. (original) The method of claim 50, wherein receiving the optical data stream including multicast traffic comprises:

receiving the optical data stream over an incoming optical fiber.

52. (original) The method of claim 51, wherein terminating the optical data stream comprises:

dropping the optical data stream from the incoming optical fiber; and

converting the multicast traffic from an optical form into a digital form suitable for

routing.
